Total No. of Questions: 101

[Total No. of Printed Pages: 3

EG-290

B.E. III Semester (CGPA) Civil Engg. Examination 2018 MECHANICS OF MATERIALS

Paper -CE-302

Time Allowed: Three Hours]

IMaximum Marks: 60

Note: Attempt all questions. All question carry equal marks.

Define of following (any three) O.1.

- i) Principal of stress and strain
- ii) Hook's law
- iii) Tapering bars
- iv) Poisson's ratio

OR

(2)

- Q.2. At a point, stresses in two mutually perpendicular directions are 8KN/cm² compressive and 2 kN/cm² compressive along with a shear stress of 2kN/cm² Determine magnitude of principal stresses and their directions and maximum shear stress at the point.
- a) Explain different types of beams with Q.3. diagram.
 - b) What do you mean by Bending moment and shear force? Explain in detail.

OR

- Q.4. A beam 6m long is simply supported at ends carries U.D.L. of 4kN/m throughout its length. Draw B.M. diagram of the beam using conjugate beam method determine the slope at the ends an d deflection in the centre EI is the flexural Rigidity of the beam EI=10500 kN/m²
- Q.5. Derive the expression for Euler equations buckling load of a column having both ends hinged.

OR

What is Rankine's formula for column? Explain Q.6. its application to long and short columns.

(3)

- Q.7. a) What are the reason of unsymmetrical bending?
 - b) Drive Torsional equation.

OR

- Q.8. A cylinder of internal diameter 205m and of thickness 5cm contain a gas. If the tensile stress in the material is not exceed 80N/mm² determine the internal pressure of the gas.
- Q.9. a) What are the behaviour of material under tension? Explain in detail.
 - b) What do you mean by "Shear and torsion"? Explain in detail.

OR

- Q.10. Explain in these terms (Explain in detail)
 - i) Bending moment
 - ii) Fatigue testing
 - iii) Impact and Hardness
 - iv) Compression
